Skip to main content Environment Mike Bloomberg has long been a global leader in the fight against climate change, from his pioneering work as mayor of New York City to his leadership as the United Nations Secretary-General's Special Envoy for Climate Ambition and Solutions. Bloomberg Philanthropies' Climate & Environment program is at the forefront of U.S. and global efforts to fight climate change and protect the environment across a key array of issues, from driving the transition to clean energy and supporting climate action in cities, to preserving ocean ecosystems. These programs accelerate progress on the most serious threats to our environment by focusing on a set of critical challenges and by supporting the work of leading groups and emerging initiatives. Together with city leaders, policymakers, grassroots movements, environmental advocates and businesses, Bloomberg Philanthropies is taking bold action to protect the planet. After counting down 85 actions in the 60 days leading up to COP26 in November 2021, UN Special Envoy for Climate Ambition and Solutions Mike Bloomberg spent the week in Glasgow working with climate leaders to accelerate the clean energy transition, elevate local climate action, and mobilize climate finance. On the ground in Glasgow, Mike met with global leaders from government and business, called for organizations and institutions around the world to set ambitious climate goals, and announced support for a number of vital efforts to turbocharge the fight against climate change. Read more A skyline view of Glasgow, Scotland, the host city of COP26. Science shows that the impacts of climate change are worsening — and that the world needs to move quickly toward a 100% clean energy economy. Beyond Carbon, the largest-ever coordinated campaign against climate change in the U.S., is working to drive the country closer to that goal. It builds on the progress of the U.S. Beyond Coal campaign, which has helped retire more than 65% of all coal plants in the U.S. to date. Read more Grassroots volunteers and advocates at a Beyond Carbon event in Denver, Colorado. Coal remains the world's single largest source of carbon pollution, which presents grave risks to both our health and our planet. If we want to stave off the worst effects of climate change, the data shows we must end global reliance on coal by 2050 or sooner. Using data-driven strategies, Bloomberg Philanthropies' Global Coal and Air Pollution program works in key geographies around the world to end our reliance on coal, support the global transition to clean energy, reduce air pollution, and protect public health. Read more Beyond Coal volunteers rally in Los Angeles, California. Photo credit: Sierra Club Ensuring the health of our ocean requires protection against both the inevitable long-term impacts of climate change, as well as the immediate threats of pollution and overfishing. Bloomberg Philanthropies' Vibrant Oceans Initiative is facing that challenge head-on through collaboration with world-class research and advocacy partners and local governments from top fishing nations around the world. Since 2014, VOI has worked to increase transparency in fishing practices, protect coral reefs, and implement data-driven policies to safeguard the health of the ocean and the 3 billion people who depend on it. Read more Near-shore fishermen on the coast of Barra de Lagoa, Santa Catarina, Brazil. Photo credit: Bento Viana Photography and Oceana Cities are leading the way on major challenges, including climate change, and Bloomberg Philanthropies works closely with mayors to support their efforts. From global city networks like the C40 Cities Climate Leadership Group and the Global Covenant of Mayors for Climate and Energy, to U.S.-based efforts like the Bloomberg American Cities Climate Challenge and America's Pledge, Bloomberg Philanthropies supports cities around the world as they work to promote climate action, sustainability, resilience, and equity in the fight against climate change. Read more An electric bus on a road in Kolkata, India. Photo credit: Subrata Biswas/AP Images for C40 Cities As we fight the health and environmental impacts of climate change, we must also address the economic consequences of a warming world. Mike Bloomberg leads a number of efforts to involve the financial sector in the fight against climate change, including by helping companies better understand and disclose the climate-related risks they face, and by driving greater private sector investment in climate solutions. Read more Contractors install SunRun Inc. solar panels on the roof of a new home at the Westline Homes Willowood Cottages community in Sacramento, California. Photo credit: David Paul Morris In order to ensure effective, rapid action on climate change, public awareness and political will is essential. Mike Bloomberg and Bloomberg Philanthropies have made raising awareness about the urgency of the climate crisis an utmost priority, working with key partners to publish a book and release two documentaries that address climate issues: bestseller Climate of Hope with former executive director of the Sierra Club Carl Pope, and documentaries From the Ashes and Paris to Pittsburgh with National Geographic Documentary Films and RadicalMedia. Read more A scene of the solar farm at Farmers Electric Cooperative in Kalona, Iowa from the film "Paris to Pittsburgh." Top photo: Mike Bloomberg joins Orlando Mayor Buddy Dyer to announce the potential impact of the Bloomberg Philanthropies American Cities Climate Challenge. With Bloomberg Philanthropies funding, Orlando will expand community solar programs and grow other renewable energy projects in the city. Skip to content The Electric Vehicle Outlook is our annual long-term publication looking at how electrification, shared mobility, autonomous driving and other factors will impact road transport in the coming decades. The report draws on our team of specialists around the world and looks at scenarios for how these trends will impact the automotive, oil, electricity, infrastructure and battery materials markets, as well as CO2 emissions. China still dominates the global EV market, but sales are rising quickly elsewhere too. Battery electric are pulling ahead of plug-in hybrids and the gap is set to widen further in the years ahead. Note: Includes highway-capable passenger EVs. Excludes low-speed EVs, e-buses and commercial EVs. All figures 2021. This year's report includes a "Net Zero" scenario which investigates what a potential route to carbon neutrality looks across all segments of road transport by 2050. It also includes five thematic highlights on important emerging topic areas: The supply and demand dynamics for battery metals from now to 2030 Reshaping mobility demand through modal shifts Size of the electric vehicle market opportunity between today and 2050 in the Economic Transition Scenario Peak year for road transport oil demand increase in global electricity demand in 2050 caused by electrifying almost all of road transport in the Net Zero Scenario See the executive summary below to find out more on the implications of EV adoption for energy markets, raw materials, emissions, charging infrastructure and more. BNEF Clients BNEF clients can access the full report, including the breakdown by segment, technology and region, as well as the underlying Excel data and previous editions.
